BOARD OF DIRECTORS

Jiří Holoubek / President of the Association:
– Chairman of the Board, ELCOM, a.s.
– Member of the Board, Confederation of Industry of the Czech Republic
Otto Daněk / Vicepresident of the Association:
– Chairman of the Board, ATAS elektromotory Náchod, a.s.
František Hýbner / Vicepresident of the Association
Pavel Prior / Vicepresident of the Association:
– CEO, PROSPEKSA, a.s.
František Hála – Chairman of the Board, TESLA akciová společnost
Jiří Konečný – Chairman of the Board, ELKO EP, s.r.o.
Vladimír Kysela – General Director, Rotor Clip s.r.o.
Michal Mika – Director, LOGAREX Smart Metering, s.r.o.
Pavel Mík – Regional Focused Factory Manager, ABB s.r.o.
Roman Schiffer – CEO, OEZ s.r.o.
Zdeněk Stuchlík – Chairman of the Board, ZPA Smart Energy a.s.
Romana Špačková – Chairman of the Board, Minerva Boskovice, a.s.
Martina Turpin

HONORARY MEMBERS OF THE BOARD

Stanislav Adamec – CEO, FVE BS s.r.o.
František Hrdá – Minerva Boskovice, a.s.
Pavel Kafka – President of the Czech Management Association

SUPERVISORY BOARD

Stanislav Adamec – Chairman of the Supervisory Board / CEO, FVE BS s.r.o.
Jiří Kohout – CEO, Schmitt & Schmitt s.r.o.
Dagmar Negrová – CFO, Chemoprojekt, a.s.

JIŘÍ HOLOUBEK

born in 1955 in Zlín

After graduating from the Faculty of Electrical Engineering of Brno University of Technology in 1979, he worked as a designer and later as a research worker in "Elektromontážní závody Praha" (Electrical Assembly Plants Prague) in its Development Department of Electric Drives in Brno. In 1985 to 1992, he worked as a Senior Lecturer at the Department of Electrical Power Engineering of the Faculty of Electrical Engineering of Brno University of Technology, where he dealt with high-power electrothermal appliances, variable speed drives, and distribution facilities for industrial networks focusing on reactive power compensation, electromagnetic compatibility of power systems, and power quality.

Since 1992, he has been working in the Company ELCOM, a.s., of which he is a co-founder and where he has served as the Chairman of the Board. He continues to be intensively and systematically involved in the areas of energy disturbances and power quality, and since 2010, he has been coordinating projects and construction of laboratories and testing facilities of heavy-current equipment, in particular electric machines. In addition, he has been dealing with similar activities in companies in Abu Dhabi (United Arab Emirates), Changshu (China) and Hong Kong.

In 2008, he was elected a member of the Engineering Academy of the Czech Republic. Since 2009, he was the Board Member and since 2012, he has been the President of the Association. He is a member of the Scientific Board of the Faculty of Electrical Engineering and Communication of Brno University of Technology. He is the author of a university textbook, co-author of a textbook dealing with the issues of the reactive power compensation, and author or co-author of numerous articles in specialist electrical engineering journals and papers in expert conferences. Within his scientific and research activities, he has been cooperating with the faculties of electrical engineering of some Czech and Slovak universities. In 2014, he became the Board Member of the Confederation of Industry of the Czech Republic.

Dear friends and supporters of Czech electrical and electronic industry,

It is my great pleasure that I can present you the new catalogue of the Electrical and Electronic Association of the Czech Republic even this year. This catalogue is a traditional source of basic information about the Association's member companies, their professional and product focus, and the most important contact details. In addition, through this catalogue, we would like to introduce the activities of the Electrical and Electronic Association of the Czech Republic, focusing on services for our members, but above all, the activities directed to the external business environment, technical education, the field of standardization, as well as towards the partners of the social dialogue. We will be very pleased if you use the contacts details of the Association's Secretariat mentioned in the catalogue, as it is ready to communicate professionally with you not only regarding member companies and activities of the Association, but it will also help you find other information about the Czech electrical and electronic industry, which is important for you and your business.

The Electrical and Electronic Association of the Czech Republic is a professional and employers' association, which, owing to its long-standing systematic activities supporting the business community, has become a dignified representative of the Czech electrical and electronic industry, i.e. the industry which is deeply rooted in the Czech Republic and has had a long and rich tradition.

The traditional and constantly developing sectors, mainly in the area of electric power engineering, are being extended with a number of sectors in the area industrial automation, mechatronics, microelectronics, machine vision, and ultimately ICT including speech recognition and artificial intelligence.

The Czech electrical and electronic industry has traditionally had a subcontracting character, yet there has also been a growing share of products and technical solutions intended for end users. Similarly, there has been an increasing number of electrical engineering companies which are contributing very actively to scientific research and innovation activities either team members consisting of institutes of universities of technology and research organisations, or they build development and innovation teams solely from their own staff members. Even the members of the Electrical and Electronic Association of the Czech Republic include the institutes providing research and development work for global technological companies and true leaders in the area of advanced technologies.

Currently, incorporation into production and technology chains of multinational corporations, as well as the efforts to enhance the competitiveness of the Czech electrical and electronic industry, is reflected in the gradual implementation of individual elements of the Industry 4.0 concept in all corporate processes. It should be noted that our companies have encountered the terms such as "digital factory", "the Internet of things", "cyber-physical systems" and others for nearly 10 years, thus taking the lead when implementing Industry 4.0, as well. The Electrical and Electronic Association of the Czech Republic is also actively involved in this process, attempting to promote digital awareness not only of the Czech electrical and electronic industry, but also other industrial fields and sectors.

On behalf of the entire Board and myself, it is my honour to assure you, as our partners and customers, that it is still our endeavour to promote the good reputation of the Czech electrical and electronic industry, its high professionalism, as well as openness to cooperation.

Jiří Holoubek
President of the Association

The Czech Accreditation Institute

The national accreditation body of the Czech Republic notified by the European Commission

CAI provides accreditation of:

- ☐ Testing laboratories
- ☐ Calibration laboratories
- ☐ Medical laboratories
- ☐ Certification bodies certifying products
- ☐ Certification bodies certifying management systems
- ☐ Certification bodies certifying persons
- ☐ Greenhouse gases verifiers
- ☐ Inspection bodies
- ☐ Proficiency testing providers
- ☐ Reference material producers
- ☐ Environmental verifiers of EMAS programme

Czech Accreditation Institute

Olšanská 54/3, 130 00 Prague 3, Czech Republic
Tel.: +420 272 096 222, Fax: +420 272 096 221
E-mail: mail@cai.cz, Website: www.cai.cz

„Accredo – delivering confidence“

CAI is a member of international organizations and a signatory of multilateral agreements:

- ☐ European co-operation for Accreditation (EA)
- ☐ International Laboratory Accreditation Cooperation (ILAC)
- ☐ International Accreditation Forum (IAF)
- ☐ Forum of Accreditation and Licensing Bodies (FALB)

JAN PROKŮŠ

born in 1977 in Prague, Czech Republic

He graduated at the Faculty of Electrical Engineering of the Czech Technical University (FEE-CTU) and worked during the follow-up doctoral studies at FEE-CTU as assistant at the Department of Circuit Theory where he focused on the topic of analysis and processing of digitized biological signals.

Later he entered a company creating and managing data for digital maps. Within this company, he participated in pilot operation of radio transmission system sending actual transport information for navigation devices.

Since 2005, he has worked at Association, since 2013 at the position of Director of the Association.

He is officially appointed expert witness within the meaning of the Act on the experts and interpreters in the fields of electrics, electronics and cybernetics.

In 2018, the questions of Industry 4.0 still continue to be a major topic. The Association, and especially its members, have a proven track of record with its implementation into practice. We will further attend to this topic, mainly at the industry level – we still observe other aspects of 4.0 as well, however, we feel the focus of our work to be two specific areas – implementation of Industry 4.0 into practice and education of young people who are indispensable to maintain the industry within the Czech Republic.

A second major area of focus will be the privacy policy. In this area, we have been actively involved in the protection of the interests of our member companies since the end of 2017, and we have no intention to leave off these activities. We are both entering the legislative process as well as helping our members to acquire orientation in this topic rationally.

A third news for the current year is market supervision. We pursue activities serving to make the market supervision by the respective domestic authorities in the Czech Republic more efficient, and we cooperate on this with other initiatives within the whole of Europe, and support the enforcement of this new framework to as broad an extent as possible.

Of course, we are not quitting our traditional services – we have been successful in assisting you with export, providing consultancy regarding subsidies, energy efficiency or helping to acquire high-quality work force to name just a few.

With us, you get professional know-how, valuable contacts, and an ethical lobby in the area of the electric and electronic industry and beyond. Let me please quote part of the Constitution of our Association: This organization associates legal as well as natural persons from within the electronic and electric industry, and further subjects with common interests with the electric industry. The Association defends the interests of employers based on the principles of entrepreneurial democracy. Apart from the collective bargaining with the labour unions itself, which forms the foundation for social dialogue, we also communicate with the corresponding bodies of the state administration (Ministry of Trade and Industry, Ministry of Labour and Social Affairs, Ministry of Education, Youth and Sports, Ministry of the Environment), and of course with our umbrella organization, the Confederation of Industry of the Czech Republic. We enable for our members to take part in the process of creation of new legislation, in the work of diverse professional groups, and in other related activities. We are supporting ethical entrepreneurship, and we also actively profess to the Code of Ethics of the CIGR. Our activities are based on the constitution and the statement of policy of the Association; and these documents are published on the Association's official website www.electroindustry.cz.

On the following lines, I would like to introduce to you the basic portfolio of services, that we provide to our members.

EMPLOYER RELATED AREA

Social Conciliation

We hold negotiations with labour unions in line with Act no. 2/1991 Coll. on collective bargaining, as amended, on behalf of those member organizations that give us their consent for this. We pursue a social dialogue with the KOVO Labour Union, and we conclude higher-level collective agreements. This way, we help our members to ensure social conciliation.

Education

We search for and substantiate projects supported by state aid in the area of human resources; we help our member subjects to be assigned these projects and to complete them. We provide support for students as well as teachers at universities and high schools.

ELECTROJOBS Meetings

We have introduced regular meetings between educators and HR officers – many hindrances to cooperation are only illusive, and also within today's education system, it is possible to set up efficient links between schools and companies. In a simple way and without further education system reforms.

Student Buses

We organize "student buses", i.e. student visits to selected European trade fairs; this way, we are showing them the top players of our area of work, and at this occasion, we are able to offer them help with their semestral or diploma theses or even employment.

Employment and diploma theses

We have created and we continuously administer the jobs.electroindustry.cz portal, which serves not only to acquire employees (especially for junior positions), trainees or part-time workers but also to assign student (bachelor's, master's, postgraduate) thesis topics.

ENTREPRENEUR RELATED AREA

We support export activities of member companies

We exercise a liberal policy and we actively support the elimination of non-tariff obstructions in trade business. We provide for Association presentations and accompanying programmes at trade and business fairs, exhibitions, and conferences in the domestic area as well as abroad. We are one of the founding members of the Trade Fair Bureau of the Confederation of Industry of the CR where we suggest electro-technical fairs to be included in the list of events supported by the state. We organize common Czech fair booths, and to those Association members who do not have their own presentations, we enable to use the Association booth for free. We participate at, and also organize business missions, cooperate with partner electro-technical associations, and search for suitable business opportunities. We maintain contacts with relevant embassies and partners from abroad. We negotiate with individual fair managements, who organize exhibitions or fairs in the electric and electronic sectors, to provide discounts and other benefits for our members.

We promote out members

We publish a member organizations catalogue, the EIA DIRECTORY, which not only is distributed abroad but which is also delivered to foreign embassies in Prague, and to Czech business and economic embassy departments throughout the world. This member organizations catalogue is the printed version of the corresponding portion of our website www.electroindustry.cz, and it serves as the initial information source about the Czech electroindustry and its companies.

We award The Innovation Prize

Each year, we announce the winner of the Association's Innovation Prize with the aim to support such results of creative work, which in the best possible way substantiate the results of development in the form of a competitive product.

We supervise the market

We pursue activities serving to make the market supervision by the respective domestic authorities in the Czech Republic more efficient, and we cooperate on this with other initiatives within the whole of Europe, and support the enforcement of this new framework to as broad an extent as possible.

We organize conferences

We keep informing the professional public about the developments in the electro-technical industry through professional conferences where leading experts discuss current issues and topics. We interconnect activities of the industry and of universities which does not only apply to the area of the Czech Republic. We started participating on the work of the Forum of the Industry and Universities.

We organize general assemblies

The general assembly that is organized twice every year is a high-prestige meeting between our members and the representatives of the industry, state administration, Confederation of Industry, and other relevant partners. It serves as a networking platform supplemented by a professional programme as well as informal meetings. Among our regular guests belong the representatives of the Ministry of Industry and Trade, Technology Agency of the CR, Electrotechnical Testing Institute, Czech Office for Standards, Metrology and Testing, Czech Accreditation Institute, Ministry of Education, Youth and Sports, Ministry of Labour and Social Affairs, Czech Social Security Administration, and others.

We purchase energies for our members centrally

As the central submitter at the commodity stock exchange, we purchase electricity and gas for our members. Thanks to the leverage of the high demand, we are constantly achieving very interesting prices. And moreover, the complete process is very simple, transparent, and it fulfils the requirements set by the public contract legislation.

Research & Development – Projects, Grants & Subsidies

EIA was the partner and the receiving party of several subsidy programmes, and also is available for its members as a consultative body, partner, and assistant when seeking suitable contacts with the Ministry of Industry and Trade, Ministry of Labour and Social Affairs, Technology Agency of the CR or CzechInvest agency. We know of invitations for application still in preparation phase, and we inform our members about these in time; we actively seek opportunities to join the

programmes. We provide our members with guidance regarding tax deductions in connection with research and development.

Testing & Accreditation

We cooperate closely with the Czech Accreditation Institute on specifying the claims for technical requirements for products, and also on specific projects with the Electrotechnical Testing Institute.

We have an own collective system, RETELA

In order to comply with the obligations resulting from the Waste Electric and Electronic Equipment legislation, we founded and are administering an own collective system for the disposal of WEEE. There are already over 1000 subjects taking advantage of this system. Our system is transparent, it covers all groups of WEEE including PV power plant technology equipment. For more detailed information about the collective system, refer to www.retela.cz.

We are monitoring public contracts in the fields of electrical engineering, electronics, and IT.

We are checking all new public contracts in the CR as well as SR, we are sorting them, filtering, and sending them to member companies on daily basis.

We know what is happening in the (electro)industry

We have information from companies, and this, together with regular news monitoring, helps us to maintain knowledge about all important events from within our sector. We transfer, of course, this information to our member companies, too.

Your membership in the EIA will provide you with access to all services of the Confederation of Industry of the Czech Republic

We are one of the significant members of the Confederation of Industry of the CR, and thanks to this fact, our members can take part in business missions accompanying our top-level state representatives, can use a broad network of contacts, or for example raise comments regarding all legislation under preparation within the CR as well as EU. You will thus receive information about such legislation before your competitors. The Confederation is one of the compulsory bodies for raising comments – we work within professional committees on the preparation of new legislation.

Jan Prokůš

Director of the Association

RETELA, s.r.o., is managing RETELA compliance scheme which enables the manufacturers and importers of electric and electronic equipment, newly also operators of photovoltaic power-plant [PVPP], to fulfil their obligations within the terms of European directives for handling of electric and electronic equipment [EEE] as well as the waste legislation of the Czech Republic.

This system has been establishing a network of logistic partners, treatment companies, collection centres as well as other system partners since 2005. We have been providing together a service for more than **5 100** clients of the Take-back scheme RETELA nowadays, who register with the aim to fulfil obligations of the whole range of ten EEE categories (over 1 100 clients) as well as for PVPP (about 4 000 clients).

RETELA has been providing collection including transport and treatment of household equipment (B2C) as well as of professional equipment (B2B).

RETELA, s.r.o., was founded by the **Electrical and Electronic Association of the Czech Republic** and operates with the support of other significant institutions – **Confederation of Industry of the Czech Republic** and **Czech-Moravian Commodity Exchange Kladno**.

It shall be pointed out that RETELA compliance scheme is a member of the European forum of compliance schemes – **WEEE Forum**, which gathers over 30 compliance schemes from the EU, Switzerland and Norway. Within the WEEE Forum RETELA is involved in preparation of international standards related to EEE, currently also within the framework of the **WEEELABEX** organization having its seat in Prague.

One of the important aspects of RETELA is its commitment to maintain the optimal level of recycling fee. It shall pointed out that the contribution has been among the lowest rates in the Czech Republic since the beginning which is not only thanks to a continuous financing system ("pay-as-you-go") but also thanks to a reasonable non-differentiation between the so called historical and non-historical EEE.

RETELA together with "Jedlicka Institute and School" started up a non-profit project **Remobil** for collection and recycling of used mobile phones, which aims to environment protection and to support disabled people.

Further details can be found at the RETELA website:

ABB (www.abb.com) is a leader in power and automation technologies that enable utility, industry, and transport and infrastructure customers to improve their performance while lowering environmental impact. The ABB Group of companies operates in roughly 100 countries and employs about 140,000 people. The company has been present in the Czech Republic since 1970 and today employs more than 3,400 people. ABB operates in 8 locations. The Czech ABB can use the international know-how and the latest results of the research and development achieved by the global company. It offers its customers a value added in the form of a strong base of its own engineering and service centres and long-standing experience of traditional Czech producers. Nowadays ABB s.r.o. has five divisions: Power Products, Power Systems, Discrete Automation and Motion, Low Voltage Products, Process Automation.

ABF, a.s. has been one of leading trade fair organisers in the Czech Republic already since the beginning of the 1990s. Through its trade fairs it creates right environment for presentation of the latest products, technologies and services. In the course of time, the ABF trade fairs have become a place for regular meetings of top experts, businesspersons, public administration representatives as well as the general public. The company built up, during the last 10 years, the largest exhibition centre known as PVA EXPO PRAGUE with a surface area of 105,000 m². The indoor exhibition area consists of seven steel modern halls and it represents an area of altogether 30,000 m². Besides this, about 6,000 m² of hard outdoor areas are used for exhibition purposes as well. The main advantage of the PVA EXPO PRAGUE Exhibition Centre is its optimum adaptability to exhibitors' requirements and excellent traffic accessibility for visitors. There is a newly constructed metro station just next to the Exhibition Centre, as well as a large-capacity parking facility which is connected to the main city bypass road system. The Centre includes also VIP premises for business negotiations and rest zones for exhibitors and visitors. The ABF company is growing together with its customers and partners.

Our company is OEM manufacturing company. We can assembly any electrical parts or products including supplying of all components (incl. plastics), if required. Our goal is to supply our customers with top quality products or services on the very competitive prices. We can offer big flexibility on level of production. Our way is to find the cheapest location for production, where the high quality of production can be reached. We have been driven by ISO 9001 quality since 2001, ISO 14001 since 2002 and automotive standard ISO TS 16 949. We also holds several automotive certifications.

Bohemia Müller Ltd. was founded in 1997. The founders are recognized experts in the area of high, very high and extra high voltage. Therefore, since its inception the company has focused on supply for the mines, large industrial companies, manufacturers and distributors of electricity and also by transmission of electrical energy. Over the years a corporate structure has been developed which at present includes four main divisions and eight organisationally subordinated centres. At present the company has the following main lines of business: Deliveries and installations of LV, HV, VHV and EHV equipment; Designing technological processing units and power equipment; Supply and installation of voltage levels of LV, MV, HV and EHV; Supply and installation of mining technology – part electrical, instrumentation and I&C; Repair and maintenance voltage levels of LV, MV, HV and EHV; Comprehensive diagnostics facility voltage levels MV, HV and EHV; Creating software applications and start-up energy technology; Business and economic activity; Company has been certified with EN ISO 9001:2008, EN ISO 14001:2004 and BS OHSAS 18001:2007.

ELEDUS s.r.o.

We are engaged in the development and production of X-ray inspection equipment for industrial non-destructive testing, control and inspection. X-ray devices are used during quality checks soldering modern components in BGA and QFN packages where the optical control methods are insufficient. X-ray (RTG) radiation can penetrate through the material and make it possible to see into the products, which can not be visually tested. You can detect short circuits inside the component, check the quality of the soldering cooling pads beneath the chip and test the BGA mounting at the joints, in order to prevent the formation of voids (air bubbles). X-ray devices of ELEDUS Company s.r.o. can also be used for quality control of welds in machine design or for quality control of the product casting or completion of any other products.

Feritová 1
787 15 Šumperk
Czech Republic

P: +420 583 360 111

E: sekretariat.sk@epcos.com

EPCOS Ltd. was founded in 1999 as the Czech branch of an international German concern EPCOS. It was established by acquisition of a part of the Czech company Pramet Inc. Šumperk, which was also producing ferrite cores since 1953. Into new halls was transferred production from foreign plants of ferrites division of EPCOS AG, from Germany, Munich and France, Bordeaux. In years 2005–2009 the production in Šumperk was extended by transfer of production of ceramic components (PTC thermistors) from EPCOS plant in Austria, Deutschlandsberg. The production of EPCOS in Šumperk covers over three thousands types of ferrite cores and one thousand ceramic PTC thermistors. 98 percent of the products are exported. The company is certified according to ISO TS 16949. In 2009 was founded in Tokyo new corporation TDK-EPC by the combination of the electronic components business of concerns TDK and EPCOS AG, belonging to global TDK group. TDK-EPC has around 43,000 employees and more than 50 plants worldwide with consolidated sales over EUR 3.5 billion. EPCOS Ltd. contributes to it and uses logo TDK.

www.exmont.cz

EXMONT-Energo a.s.

Joint-stock company EXMONT-Energo, a. s. was founded in 1991. Its founder Mr. Jaroslav Teplý, senior, was primarily focused on reparations of electric motors. Manufacturing programme was progressively extended to other branches of engineering with a focus on manufacturing and reparations of all energetic machines. Our company supports complete services in branch of water turbines, electric motors, generators and steam turbines using the most modern available technologies. Very useful in that way is our cooperation with the Department of water machines at VUT Brno (technical university). Since 2001 the EXMONT-Energo a. s. has its own manufacturing area. There was implemented a quality system the same year conforming to standard ČSN EN ISO 9001:2001. This fact significantly helps us in further progress of commercial activities.

www.kopos.cz
KOPOS KOLÍN a.s.

KOPOS KOLÍN corp. belongs to traditional Czech companies involved in production of electro-installation materials and on the Czech market operates already for many decades. The company has been formed in 1996 and continues what the the Kopus Kablo Kolín, Ltd. had developed. This company was formed after privatization of the Kablo Kolín state enterprise at the beginning of 1990's, but history of this company goes back even to the first Czechoslovak republic. All the time the company focuses mainly on the production of electro-installation materials. The KOPOS brand became a synonym to products for use in electro-installations! Even though electro-installation materials are the company's major, for many years the company works in area of research and development of radiation shielding in nuclear devices using the product called NEUTROSTOP.

LASCAM systems s.r.o.

At LASCAM systems we specialize in complex supply of automation units, robot cells, single-purpose machines, focusing on lasers and optical systems. The company also distributes laser machines and optical equipment for industry and science. Our experts have experience with traditional and unconventional laser applications such as cutting, welding, cleaning, hardening or micro-machining. Within the optical systems, we have already supplied several nonstandard optical control devices or assembled optics, precise mechanics or software for important Czech and German research institutions. A substantial part of the company's activity is focused on the research and development of industrial systems. An example is the launch of laser device **LASTIC** for contactless processing of plastics in the first half of 2017. LASCAM has its technology center with an area ca. 2000 m² in Prague and direct sales representation in Slovakia, Hungary and Serbia.

National Technical Museum

The National Technical Museum with its assortment of 60,000 three-dimensional objects, ranks among the oldest and the largest technical museums in the world. The collections include such unique objects as astronomical instruments from the 16th century used by Tycho Brahe, the first automobile produced in the Czech lands, some of the oldest daguerrotypes in the world and many other unique items. In its permanent exhibitions the museum houses collections from the fields of Transport, Mining, Architecture, Astronomy, Photography and Cinema, Printing, Technology in Everyday Life, Story of the National Technical Museum and Motor Engines. The collections also encompass a large archive of history of technology and industry and the library with about 250,000 books. Nowadays, after a long-range reconstruction, twelve permanent exhibitions are opened up to the public: Transport, Architecture, Civil Engineering and Industrial Design, Astronomy, Printing, Photographic Studio, Household Appliances, Mining, Metallurgy, Chemistry around us, Intercamera, Timekeeping and Technology by play.

TVF, s.r.o.

TVF, s.r.o. is a television and advertising company from Brno, which is involved in the complete creation of audio-visual programmes, especially TV reporting and video-marketing. We produce various videos, clips TV programmes, commercials and sponsoring. We film anywhere in the Czech Republic and abroad. We also produce radio and Internet commercials and help buy airtime. We regularly film at all important trade fairs (e.g. MSV – Engineering, Amper, FOR ARCH, Building). We place the videos long term on Internet TV with high viewing numbers. We connect videos with the web and produce them in electronic form for Facebook, Instagram ... CHECK OUT our TV programmes on: <https://www.youtube.com/user/TVFBrno>. "TVFBrno" works as a real television where viewers can choose from around 1,500 programmes in various language versions. The channel has tens of thousands of regular viewers, most of whom are businessmen, managers and people making decisions in companies and institutions. YouTube is international, so we have many viewers from around the whole world, including foreign managers based in the Czech Republic. We also publish videos on the technically-oriented StreamTech.tv The basic offer for TV reports: We provide TV reports with 3 to 5 minutes of footage at CZK 24,000 to CZK 30,000 + VAT, including release on Internet TV for a period of 2 or more years. The price includes half a day's filming in Brno or Prague. If the filming requires longer travel, travel costs should be added. For more demanding videos, the price will be calculated based on the your basic order. We leave the videos on Internet TV for at least 2 years.

Design and production of tailor – made AC rotating electric machines, electric drives and loading test stands with dynamometers, according to the customer specifications. Custom build AC electric machines and drives. Permanent magnet synchronous servomotors and motors with high dynamics and accuracy. Synchronous and induction linear motors. Electric dynamometers and test stands. Low-speed and high-speed electric motors. Synchronous and induction generators build to demand. Electric traction motors and generators. Aircraft technology board generators and electric starters. Power supply sets and rotating power sources. Certification tests with international validity. Accredited test field. Design and verification consulting. VUES Brno s.r.o. has implemented the quality system according to EN ISO 9001, and the environmental management system according to EN ISO 14001.

ZPA Smart Energy a.s.www.zpa.cz

Komenského 821
541 01 Trutnov
Czech Republic

P: +420 499 907 111

E: zpa@zpa.cz

ZPA Smart Energy is the largest and most important Czech manufacturer of electricity meters, smart systems, ripple control receivers and AMR/AMM solutions. Our expertise is based on decades long experience going back as far as 1958, as well as cutting edge technology – almost a quarter of total manpower work in R&D. Company HQ and production plant are located in East Bohemian Trutnov, heart of the Czech electro-technical industry, where industry icons like ABB, TYCO and Siemens reside as well. Subsidiaries are stationed in Prague, Berlin and Sofia. Customerwise traditionally, ZPA Smart Energy holds a leading position on the Czech market and successfully penetrates foreign markets too – be it emerging markets in Central, Eastern and South Eastern Europe or highly developed markets, such as Germany, Switzerland and the Netherlands, to mention just a few. ZPA Smart Energy products portfolio specifically targets at electrical energy measurement and management. ZPA Smart Energy offers integrated system solutions for measurement and management of electrical energy via communication modules and concentrators to communication servers and database client applications. ZPA Smart Energy a.s. is certified as per EN ISO 9001:2008, EN ISO 14 001:2004, BS OHSAS 18001:2007 by CQS as well as certified to manufacture, inspect and test electricity meters as per MID.

State of the Art Metering Solutions for Smart Grids

- Smart and safe – customized solid-state electricity meters.
- ReadEn – turn-key supervisory system, the tool for energy consumption analysis and optimization. System supports energy management as per ISO 50 001.
- Individualized equipment for utilities – bespoke production of auxiliary components for Distribution Service Operators.
- Successful AMR/AMM projects throughout Central Europe and the Middle East.
- Products compliant with cutting edge standards – PRIME, DLMS, 4G.
